

Merlinus Liberatus.

BEING AN

ALMANACK

For the Year of our Redemption,

46-6-24-120 1796,

Being the BISSEXTILE, or LEAP-YEAR;

And from the Creation of the World, according
to the best History, 5743.

And the 107th of our Deliverance by K. William
From Popery and Arbitrary Government;

But the 101st from the

Horrid, Popish, Jacobite Plot.

Wherein are contained all Things fitting and useful for such a Work; as
an Ephemeris of the daily Motions of the Planets, with their various
Configurations, Aspects, Conjunctions, Lunations, Eclipses, Astrono-
mical, Astrological, Meteorological Observations, the Rising and Setting
of the Sun, Moon, Planets, and fixed Stars, illustrated with Tables of
the Tides, Terms, and daily Equation of Clocks, Length and Break,
Increase and Decrease of Days, Semidiurnal and Seminocturnal Arches
for several Latitudes, a Chronology, Remarks on the Divisions of the
Heavens, with Judgments of the Eclipses and Seasons, handled ac-
cording to the Rules of the Ptolomean Astrology, with many other
Things relating to the Truth of Astrology. And will equally serve
also for either Parker's or Saunders's Almanack, as it contains most
of the useful Parts of those other two Works, and White's Ephe-
meris contains the rest.

Calculated for the Meridian of

By JOHN PARTREE.

— Etiam Mortuus loquitur. —

LONDON,

Printed for the Company of STATIONERS;
And Sold by Robert Horsfield, at their Hall, in Ludgate Street.

[Price stitched Eleven Pence.]

K. Ephemeris

A Table of the Common Notes, and Moveable Feasts, for the Year of our Lord 1796.

Golden Number - - - 11	Easter Sunday - March 27
Epact - - - - 20	Rogation Sunday - May 1

A Table of the Moon's Age for every Day throughout the Year 1796, whereby, with the Help of the next General Tide Table, the Times of High Water at all the Places mentioned above it are shewn by Inspection.

An Explanation of this and the following Table:

First find the Month on the Head of the Table, and the Day in the first Column on the left Hand, and in the Angle of meeting you have the Day of the Moon's Age, with which enter the following Table, and find your said Number in the left Hand Column, and over against it in the other Column is the Time of High Water at all the Places above mentioned, by Inspection. — *Example, Jan. 29* I find the Moon to be 19 Days old, and over against 19 in the 1st Column I find 6 h. 12 m. in the 2d Column, 4 h. 42 m. in the 3d; which are the Times of High Water at all those Places mentioned above in the 2d and 3d Columns on that Day. *Et sic de cæteris.*

Month.	Day.	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31

ROYAL FAMILY, &c.

BIRTH-DAYS of the ROYAL FAMILY.

KING GEORGE III. June 4, 1738	Prince Aug. Fred. Jan. 27, 1773
Prince of Wales, Aug. 12, 1762	Prince Adolph. Fred. Feb. 24, 1774
Duke of York, Aug. 16, 1763	Princess Mary, April 25, - 1776
Duke of Clarence, Aug. 21, 1765	Princess Sophia, Nov. 3, - 1777
Prs. Cha. Aug. Mat. Sept. 29, 1766	Princess Amelia, Aug. 7, - 1783
Prince Edward, Nov. 2, - 1767	Queen Charlotte, May 19, 1744
Prs. Augusta Sophia, Nov. 8, 1768	Prs. Augusta of Brun. Aug. 11, 1737
Prs. Elizabeth, May 22, - 1770	Duke of Gloucester, Nov. 25, 1743
Prince Ernest Augustus, June 5, 1771	

SOVEREIGNS of EUROPE, their Accession, &c.

Kingdoms, &c.	To whom subject.	When born.	Began to reign.
England, &c.	George III.	June 4, 1738	Oct. 25, 1760
France			
Russia	Catharine II.	May 2, 1729	July 9, 1762
Spain	Charles IV.	Nov. 11, 1748	Dec. 1788
Portugal	Mary	Dec. 7, 1734	Feb. 24, 1777
Prussia	Frederic IV.	Sept. 25, 1744	Aug. 17, 1786
Denmark & Norway	Christian VII.	Jan. 29, 1749	Jan. 14, 1766
Sweden	Gustavus IV.	Nov. 1, 1778	Mar. 29, 1792
Germany	Francis II.	Feb. 12, 1767	Mar. 1, 1792
Poland	Stanislaus III.	Jan. 17, 1732	Nov. 25, 1764
Holland	William V.	March 8, 1748	Oct. 11, 1751
Papedom	Pius VI.	Dec. 27, 1717	Feb. 18, 1775
Sardinia	Victor	June 26, 1726	Mar. 20, 1773
Ottoman Empire	Selim III.	July 17, 1761	April 7, 1789
Two Sicilies,	Ferdinand IV.	Jan. 12, 1751	Oct. 6, 1759

The FULL WEIGHT of the COINS, with the LEAST WEIGHT allowed to pass of the Gold Coin.

Wt. allowed.		Full Wt.	SILVER.		Full Wt.
GOLD.	dwt. gr.			dwt. gr.	
Guinea -	5 8	5 9 $\frac{3}{4}$	A Crown, - - -	19	8 $\frac{1}{2}$
Half Guinea, 2	16	2 16 $\frac{4}{8}$	Half Crown, - -	9	16 $\frac{3}{4}$
Quarter Guin, 1	8	1 8 $\frac{3}{4}$	Shilling, - - -	3	20 $\frac{2}{3}$
			Six Pence, - -	1	22 $\frac{1}{4}$

According to the above proportions it appears, that the value of a lb. of silver is 62s. or 3l. 2s. and of a lb. of gold is 44½ guineas, or 46l. 14s. 6d. Also that the oz. of silver is 5s. 2d. and the oz. of gold 3l. 17s. 10½d. So that the value of the standard gold is 15 times that of the silver, and 14th more.

A TABLE of TERMS and RETURNS for 1796.

Hilary Term begins *January 23*, ends *February 12*.

Returns or Effoign Days.

The Act is *July 11*.

CAMBRIDGE TERMS.

Lent Term - - begins *January 13*, - - ends *March 13*.
 Easter Term - - begins *April 6*, - - ends *July 8*.
 Michaelmas Term begins *October 10*, - - ends *Dec. 16*.

The Commencement will be *July 5*.

The angry Stars have trod most heavily
 Upon most Parts of the European Stage;
 But the celestial Twins now from dire Cronas free,
 Their Sons enjoy a calm Halcyon Edge;
 His Force abates! bright Jove in Aquar'us,
 Deigns to compose all Jars, and settle Peace.

10 February hath XXIX Days.

Our busy Muse fain would be nibbling at
 The Prophet's Theme: So pleasant is the Bait,
 That a poor ALMANACK can scarce be writ
 Without some Strains of th' Oracle in't.
 And 'twere Delight indeed, if it were so,
 We could Fate's Laws prevent as well as know.

VENUS is an Evening Star till Aug. 5; then a Morning Star for the rest of the Year.

March hath XXXI Days.

But since we cannot reach that Happiness,
 'Twere better for us that we live at Ease,
 And pass such Things: Submitting to his Will,
 That does dispense to Mankind Good or Ill,
 At his appointed Time; which none can shun,
 But such as for Assistance to him run.

No Aspect's fatal to that Man whose Mind
To virtuous Actions always is inclin'd;
The Astral Power ceases, where God's Law
Appears, our rebel Passions for to awe.
The Stars do only triumph in their Sphere,
When glorious Sol is pleas'd to disappear.

What boots it, Man, to talk of mighty Things?
 Of Battles, Sea Fights; Conquests of great Kings?
 Of Plagues, Captivities, of barren Years?
 Which to but name brings Horror, Dread, and Fears.
 Under all Changes, Christians are the same;
 Or else they're a Dishonour to that Name.

A perfect science of the mundane frame
 God doth deny to mortals; that they may
 Admire him only, and exalt his name,
 Who first did separate the night from day.
 Scimus ex parte is enough for men:
 Let us rest happy with that blessing then.

A wise Man rules the Stars, say some; and so
 He may no doubt, (while he is here below.)
 If he to reason always lend an Ear,
 He need not Mars, or Saturn's Influence fear:
 But, if he loose his hold once, then they gain
 The upper-hand, and force him to complain.

Would we be free from Troubles, Crosses, Cares,
 And quietly sit under our own Vine ;
 Enjoy the Blessings of our Holy Pray'rs
 And live at Ease ? (with Butter, Oil, and Wine ?)
 Let's learn Obedience : That our Province is ;
 And keeping there, we cannot act amiss.

But, if we needs must ramble from our sphere,
 And into Public Matters penetrate,
 No wonder if we are intangled there;
 And forc'd cry, Had I wilt? When 'tis too late.
 With his superiors let none dare contend:
 Jove's Thunder sends such madmen to their end,

True Christians should true Gospel-Lessons learn,
 Be meek and humble, magistrates obey;
 So Truth from Error they will soon discern,
 And ever walk in the securest Way.
 He never goes amiss, nor needs to hide,
 Who takes the Holy Bible for his Guide.

28 NOVEMBER hath xxx Days.

The Stars, we know, have influence and power,
To heal, and hurt, poor mortals every hour.
But true Religion soars above the Stars,
And can command to Peace the fiercest Wars :
This Empress of the Earth, and heavenly Spheres,
In following her, we shall have happy Years.

30 DECEMBER hath xxxi Days.

Then let each Man with's Lot contend'd rest,
 If he with quiet would be fully blest;
 Give to the Glorious Starry-Host their Due;
 But not forget his God and Maker too:
 For crimes against Him produce all terrene Jars;
 But Peace with Heaven corrects our way-ward Stars.

*Of the ECLIPSES that will happen in this
Year 1796.*

THE two bright Lamps of Heaven will be four times eclipsed within the course of this year; but to us they will be all invisible, as will appear by the following calculations:

The first is of the Sun, and happens on Sunday the 10th day of January, about our 6 in the morning; consequently, I need not put myself to much pains to prove it invisible in these Kingdoms, or even throughout all Europe. If it had happened at noon-day, it must certainly have been invisible to us Europeans, as no solar Eclipse can be seen wherein the Moon has South Latitude; nay, in this Eclipse her true Latitude is North, but unless it be pretty large, they are invisible. Near the Coast of New Holland, and in several parts of the Indian Sea, it will be a large defect, even where the Sun is vertical, or directly over their heads at noon-day. Along the track of its central appearance (in the said Indian Ocean) this eclipse is annular; the annulus will be near half a digit in breadth on all sides; a very beautiful appearance for the inhabitants of those parts to behold.

The second is another solar Eclipse, and happens upon Monday the 4th day of July, about our eleven o'clock at night; consequently invisible. At the Sandwich Islands, the Ladrone Islands, and the Islands of Japan, this will be a large visible Eclipse. Along the track of the central appearance (for this is also a central Eclipse) the inhabitants will doubtless be under no small surprise at the sudden disappearance of the Sun, involving them in a kind of midnight darkness, even at noon-day; for this Eclipse will be total.

The third is a partial Eclipse of the Moon, and happens on Wednesday the 14th of December, but invisible to us; for with respect to London, our metropolis, the Eclipse begins at 9 min. past one in the afternoon; and will be quite over at 34 min. past 3 o'clock: And seeing
the

the Moon cannot rise above a minute or two before the Sun sets, which is at 54 min. past 3 at London; this Eclipse, therefore, cannot be seen in our Hemisphere. At the time of the greatest obscuration (which is about 6 digits) the Moon will be vertical to such persons as happen at that time to be sailing near some of the Ladrone Islands; hence, this Eclipse will be visible to most of the large and small islands dispersed in the great Pacific Ocean; amongst which are, the Sandwich Isles, the Society and Friendly Isles, the New Hebrides, New Zealand, Van Dieman's Land, New Holland, and all along the East Coast thereof, called New South Wales, &c. It will be visible to the whole Continent of Asia; the beginning will be visible as far as the Western Coast of the American Continent; and the end will extend itself into Poland, Sweden and Denmark, and as far as our neighbours the Germans and Dutch.

The fourth and last is an invisible Eclipse of the Sun, on Thursday, the 29th day of December, about our 6 in the Morning. In the great Southern Ocean this will be a very great Eclipse, but no where total, as it is an annular Eclipse; this beautiful appearance will happen in the meridian, or precisely at noon-day, under 65 degrees and a half South Latitude, and 91 degrees and a half of East Longitude from London. This Eclipse I expect will be seen as far as Van Dieman's Land, and the utmost Southern extent of New Holland.

An Account of an Occultation of SATURN by the MOON.

The last celestial phenomenon I shall here give an account of, is an occultation of the planet Saturn by the Moon, October the 21st, in the morning; and will be visible here if clouds interpose not: The immersion of Saturn behind the bright part of the Moon, will be at London at 28 min. past 1; and his emersion from behind the dark part of the Moon, will be at 14 min. after 2 o'clock, apparent time. This occultation through a telescope will be a curious sight, as Saturn's amazing ring will appear to encircle his globe, and extend itself on each side to a considerable distance from the Planet.

Genethliacal Astrology.

IN the course of my annual performances, I have lately inserted some few scraps concerning the verity and influence of the Stars in Nativities; yet some persons will be ready to say, To what purpose is a discourse of this nature annually inserted here, when astrology is daily so greatly exploded by the learned, as of late it is known to be, and that the world is now grown to that pass, by means of those profane and simple notions, that men believe that the Stars in the Heavens are of less use than the signs at shopkeepers doors; notwithstanding Sacred Writ assures us, that they were placed there by their maker, for signs and seasons! If this text be allowed for a truth, which none dare to gainsay, then it must follow, that a man to know there are Stars and not to be acquainted with their influence, is to as little purpose as for a Physician to know the names of drugs, and yet be utterly ignorant of their virtues and uses; for as there is no mathematical demonstration for the verities either of Physick or Astrology, so it must be determined by experience, and that must be the touchstone to prove the verity of both sciences; for there is no visible appearance to prove that rheubarb will purge, which by trial and experience is certainly determined it will effect. So in Astrology, the artists therein, from many observations made on the influences of the planetary bodies, have determined the planet *Saturn* to be a propagator of cold; and on the contrary, the planet *Mars* to be the exciter of heat, and so on with the rest of the celestial wanderers; all which have their several influences, according to their natures, as hath been proved by a long series of observations, whereby the ancients have laid down rules and aphorisms, to be a guide for their succeeding followers. I now proceed to give another experiment in this part of Astrology.

Some Observations on the Nativity of Sir CHRISTOPHER HEYDON, who was born August 14, at 23 min. past 11 at Night, in the Year 1561.

R. A. 323. 42.

Latit. Plan.

h 0° 45' M. A.
 41 2 M. A.
 36 25 M. A.
 26 52 M. A.
 1 5 M. D.
 D 4 28 M. D.

The foregoing is a scheme of the nativity of that most learned Knight and Philosopher, Sir *Christopher Heydon*, the author of that incomparable Defence of judicial Astrology, written in answer to a book published against Astrology by Mr. *John Chambers*; in which defence, this learned Knight was so exact in his responses, so satisfactory and full in his arguments, so strenuous in his proofs thereof, that when once Mr. *Chambers* (who no question was a great scholar) had seen and perused it, and found the same unanswerable, and his own arguments so fully refuted and retorted, he for very grief died. Divers others since Mr. *Chambers*'s time, have pretended to answer this unanswerable work; as Mr. *Vicars*, Mr. *Rowland*, and several other authors, who all have so far failed in their enterprize, that they have (instead of proclaiming themselves scholars to the world) made themselves the very pageants of envy, ignorance, and folly. The book itself is of such excellent use, in that it answers all objections brought against the art, from Reason, Scriptures, Fathers, and Councils; and in so plain and familiar a way of reasoning, that I would advise every young student to acquaint himself therewith:

therewith: that by it, he may be enabled to understand, first, what it is he would study; and secondly, how to defend the same against the malicious and ignorant opposers of the art.

In the scheme of this nativity, we find Π (the latter part thereof) ascending the horoscope; and $\S$ lord thereof, in xx his greatest dignities, there in platick Δ to II , and $\ast$ to $\S$: Arguments of very great learning, ingenuity, sagacity, and prudence. The Moon in xx , in $\S$ with that noble fixed Star called *Spica Virginis*, and in Δ to $\S$ on the *Medium Caeli*; which denoted in this honoured native, not only a sharp and active fancy, that quickened him in his studies, but gave him great courage and resolution, &c. &c. For you must understand, he was as well a soldier as a scholar; and both by sword and pen did purchase himself such lasting honour and fame that time will never wear out. This worthy native died in the year 1620, a little before the 59th year of his age began: He had then operating by direction the D to the $\S$ of H , both with and without Latitude, and also the ascendant ad $\S$ *Martis cum Latitudine*, fatal directions. The reason of my giving this geniture, is to perpetuate the merits of so honourable and worthy a person.

Astrological Observations for the Year 1796.

THE WINTER QUARTER,

Or, The Sun's Transit through VP , III , X .

THIS Quarter begins on Monday, the 21st day of December, 1795, at a quarter past 7 o'clock at night, when 10 deg. of Ω ascend, and 20 deg. of Υ possess the mid-heaven. We find the Moon in the second degree of $\S$, departing from the $\S$ of $\S$ and Δ of the $\odot$, and applying next to the $\square$ aspect of II , lord of the 9th house. This is but a sickly face of the Heavens, and it will be well if the seeds of some pestilential distemper be not now sown. In the affairs of the world, it denotes tumults, riots, insurrections, and malicious projects, more particularly in the North and Eastern parts of Europe, where men of the most corrupt minds are very active. But the noble Trine aspect of Jupiter and Saturn at this time, will no doubt promote some important transactions, promising

ASTROLOGICAL OBSERVATIONS. 45

misg increase of trade, and harmonious proceedings among our superiors; so that I hope the late recent and unhappy contests and mistakes may be in a fair way of reconciliation. Peace and tranquillity seem now to be approaching, and laying the heats and animosities that have so long distracted the Continent of Europe. The French nation are about settling their government on the broad basis of civil and religious liberty; may England take warning by the ills of that unhappy country! The affairs of the Emperor of Germany go on but slowly, yet he seems to gain some advantages, but it is more by negotiation than fighting. Holland is confused in her councils, they seem to betray a want of resolution, which adds to their difficulties. The Turks are disturbed and unsettled. Mr. BROTHERS's Prophecy (if it may be called so) concerning the Jews, not likely at present to be fulfilled; no, not even in this age!

THE SPRING QUARTER,

Or, The Sun's Transit through ♈, ♉, ♊.

A Scheme of the Heavens, at the SUN's Entrance into
ARIES, for the Latitude of LONDON.

THIS Quarter will begin this year on Saturday, the 19th of March, at 42 min. past 8 at night; at which time we find 28 deg. of α ascend, and 8 deg. of Ω on the M. C. The Planet Saturn is in the 8th deg. of Π , with- in orbs of an opposition of Mars in the 17th deg. of $\uparrow$; and the rest are exhibited as you may see in the foregoing scheme. The Planets are more amicably disposed than they have been for some time (the above 8 excepted) and men seem willing to endeavour to allay the animosities of these tumultuous and troublesome times; but the above 8 of the superiors, gives some reason to fear that the affairs of Europe are in a disturbed and unsettled condition. I am afraid a new scene of affairs will arise in the world, especially in Spain, in Turkey, in Germany, in Poland, and in Russia, &c. some treacherous designs in respect to their Governments, Laws, Customs, Privileges, Leagues, Alliances, Religion, &c. these are the misfortunes and calamities that those people will labour under, and that for some years yet to come: nor can we at all expect to be free, for the Planet Saturn is now passing through London's ascendant. Pray God preserve us from sickness and all other calamities. The affairs of the French are yet in an unsettled posture.

THE SUMMER QUARTER,

Or, The Sun's Transit through ϖ , Ω , μ .

THIS Quarter begins on Monday, the 20th day of June, at 36 min. past 6 in the afternoon, when 10 deg. of $\uparrow$ ascend, and the 10th deg. of α culminate; the Moon in the first, is departing from the 8 of the $\odot$, and next applying to the * of Υ . The 8 of $\uparrow$ and δ are again within orbs. This is likely to prove a very active and busy Quarter; all or most nations seem deeply immersed in the troubles of these times. This year will undoubtedly be productive of great changes, revolutions, and unexpected events; but these events, I hope, will be such as arise from treaties, new alliances, and change of hands, and not from military preparations, or martial actions in the field.

The planets in their motions seem to smile;
O, may their influx glad our BRITISH Isle!
Repair all Breaches, cleanse and heal each sore,
And ENGLAND's wealth and honour both restore!

THE AUTUMNAL QUARTER,

Or, *The Sun's Transit through ♎, m, ♏.*

THIS Quarter begins on Thursday, the 22d day of September, at 29 min past 8 in the Morning, when 5 deg. of ♎ culminate, and 26 deg. of ♎ are on the horoscope. The Moon in the 8th separating from the ☐ of ♈, and next applying to the * of ♏. We live in daily expectation of a better understanding of the intentions and designs of the great and active leaders of the affairs of Europe, who hitherto have much concealed their motives and resolutions. There are greater hopes of amity in councils and consultations, both in England, France, Germany, and other places adjacent. God grant it may go on and prosper. Blessed are the peace-makers, but cursed are the war-makers. The diseases of this Quarter will not be very dangerous, nor much different from some former years distempers; we see all men are willing to extend the thread of their lives as far as possible, and yet, why should we dread our end, when we all know there is nothing more certain, and that all things are limited. And thus I conclude this section, and my judgment of the whole year, with God preserve his sacred Majesty GEORGE the Third, his royal Consort, and all the royal Family, Amen.

FINIS.
